Recruitment

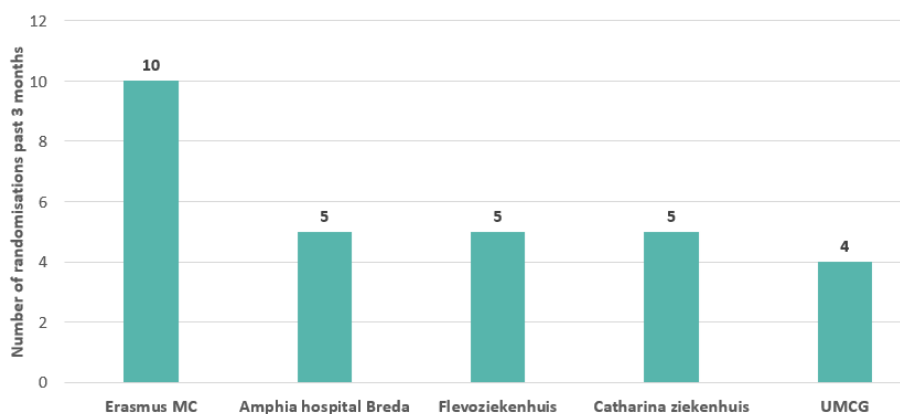

The figure below displays the current number of randomized participants, which has now reached 1,279. As mentioned in the previous newsletter, the goal is to enroll a total of 1,750 participants by the end of the year. We know from other trials that the starting phase of a trial knows slow inclusion, caused by centers having to be started up one by one. But also the last phase of a trial may know slow inclusion, caused by “inclusion fatigue” among participating centers. Please let this not happen to our trial. It is at the moment running successful, and we all would like it to continue this way. We sincerely appreciate your dedication so far and look forward to making this trial a success together!

Top includers last 3 months

The figure below shows the centers that enrolled the highest number of participants over the last 3 months.

Our congratulations to the Erasmus Medical center in Rotterdam! The study team included 10 participants in the last 3 months, good job!

Up to March 20, 2025

Latest update on trial endpoints

The primary endpoint is a composite of heart failure hospitalization, all-cause mortality or, for those not on dialysis, kidney failure (start of dialysis longer than 1 month, receiving a kidney transplantation or death due to kidney failure). As this is an endpoint-driven trial the final goal is to reach 468 endpoints to complete the trial. In the last month we saw the endpoints steeply increasing. Currently there are 80 first confirmed endpoints, this indicates an increase of 10 compared to last month.

The Clinical Adjudication committee adjudicated 4 new heart failure endpoints, sites will be informed per individual case by the Sponsor. The majority was reported for the CKD group with a total of 53 first confirmed endpoints.

Recruitment best practices!

We love sharing inspiration on how to boost local recruitment! Below picture was taken in Albert Schweitzer Hospital in the Netherlands. The poster mentions ‘In our center, we conduct research on the protection of the heart and kidneys in patients with severe kidney damage.’ Feel free to reach out if you would like to receive a copy of the logo or to share your best practices as well!
